Monkeypox is a disease caused by infection with the Monkeypox virus which is part of the same family of viruses that causes smallpox. It spreads from person to person through direct contact with the infectious rash, scabs, body fluids, and "respiratory secretions". How concerned are you that you might contract the Monkeypox virus?

Monkeypox can be effectively dealt with by receiving a vaccination for Smallpox. Canadians born in 1972 or later have not been routinely immunized against smallpox. Knowing this, how likely would you take the Smallpox vaccine or vaccine booster if it were made available?

Proportions/Means: Columns Tested (5% risk level) - B/C/D/E/F/G/H/I - J/K - L/M/N - O/P/Q - R/S/T - U/V

Overlap formulae used. * small base

Comparison Groups

Independent T-Test for Means (equal variances), Independent Z-Test for Percentages (unpooled proportions)

Uppercase letters indicate significance at the 95% level.
