The EPA is introducing a series of regulations designed to prematurely close well operating coal plants that are capable of providing electricity 24 hours a day seven days a week, in favor of weather-dependent renewables. Are you concerned that the rush to transition to renewable energy is goingo sacrifice our ability to keep the lights on?

The EPA's justifications around shutting coal plants are based on the assumption that renewables could replace the coal capacity that is at risk of imminent loss, but the required amount of renewables still need to be permitted, built and connected to the grid with vast transmission and backed up by battery technologies that are not yet available at grid scale.Do you agrree or disagree wit the followingstatement?

The U.S. should pause closures of existing, well-operating power plants until replacement generating capacity is in place and operational.
