I have confidence that if I needed medical care in our community hospital right now I could be admitted for a few days for treatment

While you may have to wait a little bit longer to get a vaccine for yourself and others, how willing would you be to have half of the vaccines normally delivered to your community diverted to these very specific 'hotspots' that may even be outside of your province for emergency purposes for the next 30 days so that more people could be vaccinated there than usual to try and stop the community spread from occurring?

The federal government has in place the Canada Recovery Sickness Benefit which counteracts the fact that several provinces have not expanded their own sickness benefits. It provides \$500 per week for up to four weeks and cannot be claimed if an employee has paid sick leave through their workplace. Workers can only apply if they're sick with COVID-19, or if their employer or public health authority advises them to self-isolate; they must be off sick for at least 50 per cent of their normal work week; it's restricted to workers who've earned at least \$5,000 in the 12 months before the date they apply for the benefit—which can take months to get back. Many say that there is a sick benefit gap—while the federal coverage may be used if a worker fits that criteria, it doesn't provide immediate sick days for many hourly paid essential workers who will just keep going into work ill for fear of their boss retaliating or losing a few days of pay. Given this, which would you support?
